

# Formglas

Shaping Possibilities

Feature Project ■ **BROOKS BROTHERS**

Industry: Retail    Location: Bayshore Mall, Glendale, Wisconsin    Design: Permasteelisa, USA

■ Architectural elements and cast in signage brings design continuity to the brand.

### Concept

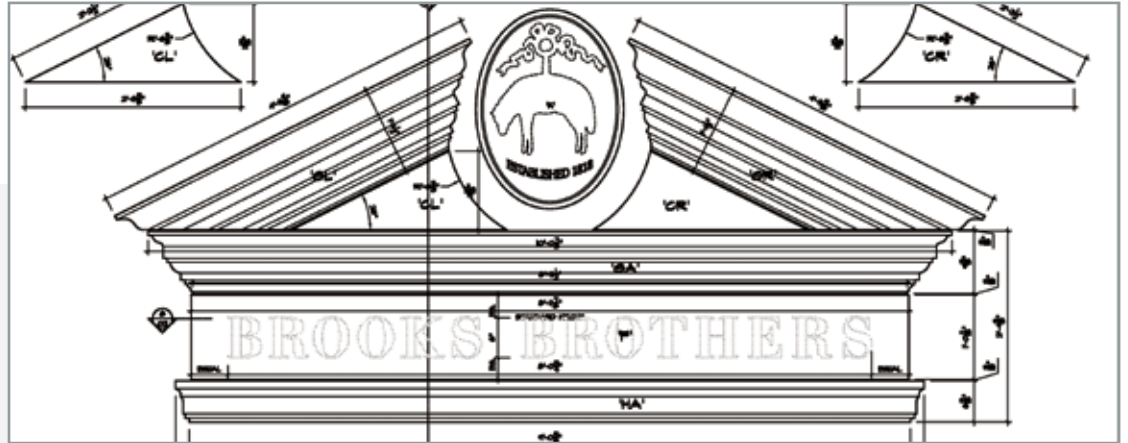

When Permasteelisa, USA required the look of Limestone for their exterior storefront entry to match their original Limestone façade wall, they turned to Formglas. Already the supplier for Brooks Brothers interior storefronts, Formglas was able to utilize the existing interior molds to help save on production costs.

### Specs

- Formglas exterior glassfiber reinforced cement (GRC) in Seattle Sand color with a sandblasted finish was selected to replicate real Limestone.
- Lightweight and more cost effective than actual Limestone, Formglas GRC can be molded into any shape desired.
- Quick and easy to install makes Formglas GRC material a practical and effective solution (two complete entrances were installed in three days).

## Technical Specifications

Architectural Drawings

- Manufacturing production drawings provide clear instructions that support timely installation.

Final Product

Custom molded products by Formglas for interior and exterior design applications are specified by more designers and architects than any other products of their kind in the world. For more than four decades, Formglas has supplied the commercial building and design industry worldwide with the highest quality molded stone and concrete textured finishes, luxurious cold cast metallics and precision engineered cast gypsum surfaces. Our team of architecturally-trained product specialists work closely with designers and architects to create practical and cost-effective solutions that reduce installation cost, provide enhanced appearance and ensure years of durability and beauty. Best of all, Formglas products and services are backed by the industry standard for quality, service and on-time delivery.
